

LEO Release Notes: October 2012

This document is intended to inform you of changes to the LEO system associated with the current LEO release. It includes a brief summary of the recent system changes, and a list of known issues.

Brief Summary of Changes

This LEO release includes a number of important new features, including:

- Data entry functionality for the revised Counselor Information Form (including CAQ data)
- Data Entry for “Other” rapid HIV test

Other minor changes include:

- Various validations added to HTF data entry screens
- Interventions may now be filtered by year on the data entry screen
- Other minor bugs and errors have been corrected, including known issues in HTF data entry from last release:
 - Referrals section now available from encounter summary screen.
 - Residence State/Territory options have been update to include options for clients living outside the US.
 - Date fields (such as Disclosure dates and PIF dates, etc.) are no longer inappropriately restricted to the fiscal year of the initial encounter.

Data Entry for Counselor Information Form (CIF)

Data entry screens are now available for counseling and testing activities. These screens should be used to enter records for client visits documented on the CIF and/or CAQ.

A webinar on the use of the CIF and CAQ was provided in early July. The recording of this webinar was posted and is available for viewing here: <https://vimeo.com/46037698>

Data Entry for “Other” Rapid Test

Agencies using medical staff to conduct rapid HIV testing using a test other than OraQuick Advance may now enter lab slip data into LEO. To enter lab slip data from rapid test other than OraQuick, simply select ‘other’ test type on the lab slip, and type in the name of the test in the ‘specify’ field. Complete the rest of the data entry screen as usual, including the fields for time, temperature, lot number, etc. Please note that validations for the fields to indicate when the test was run out of compliance with testing instructions are not in place since quality assurance specifications vary depending on the test run.

Known Issues

- TPA-short forms may no longer be entered. Since TPA-S is no longer an intervention type starting in FY 12-13, this will not impact current interventions, but could affect back-entry of data from last FY. It will be fixed in the upcoming patch.
- C&T reports continue to be functional on previous fiscal year data, but will not be accurate/functional for FY 12-13 data until they are updated in the next patch, planned for approximately two months out.
- Data entry for HE/RR interventions for FY 12-13 is not yet available. This planned functionality is expected to roll out within approximately two months. Please tune in to LEO stakeholder calls for updates.
